

IfError

[G+](#) [Follow](#) 9.7k

This example illustrates the IFERROR function in Excel.

1. For example, Excel displays the #DIV/0! error when a formula tries to divide a number by 0.

	A	B	C	D	E	F	G	H	I
1	829	2	414.5						
2	953	0	#DIV/0!						
3	946	4	236.5						
4	604	4	151						
5	576	3	192						
6	554	5	110.8						
7	637	0	#DIV/0!						
8	560	2	280						
9	672	4	168						
10	728	10	72.8						
11									
12									

2. Use the IFERROR function. If a cell contains an error, an empty string ("") is displayed.

	A	B	C	D	E	F	G	H	I
1	829	2	414.5						
2	953	0							
3	946	4	236.5						
4	604	4	151						
5	576	3	192						
6	554	5	110.8						
7	637	0							
8	560	2	280						
9	672	4	168						
10	728	10	72.8						
11									
12
