This example illustrates the ISERROR function in Excel.

- For example, Excel displays the #DIV/0! error when a formula tries to divide a number by 0.

	A	B	C	D	E	F	G	H	I
1	829	2	414.5						
2	953	0	#DIV/0!						
3	946	4	236.5						
4	604	4	151						
5	576	3	192						
6	554	5	110.8						
7	637	0	#DIV/0!						
8	560	2	280						
9	672	4	168						
10	728	10	72.8						
11									
12									

The ISERROR function checks whether a value is an error and returns TRUE or FALSE.

- Use the IF and the ISERROR function. If a cell contains an error, the value 5 is returned. If not, the value 100 is returned.

	A	B	C	D	E	F	G	H	I
1	829	2	100						
2	953	0	5						
3	946	4	100						
4	604	4	100						
5	576	3	100						
6	554	5	100						
7	637	0	5						
8	560	2	100						
9	672	4	100						
10	728	10	100
